- * * I find in Mionnet, S. vol. vii, p. 55, under Perga, a description intended for this coin, but very imperfect, and with a note throwing a doubt upon it. The authenticity of this coin is beyond suspicion. The Pomegranate, not noticed here by Mionnet, seems to give the coin rather to Side than Perga, as Mionnet, in his Text, vol. iii, p. 483, No. 216, has done with a coin of Tranquillina bearing the same legend, and having a pomegranate in same position.

*** This is, as well as I can remember, the first specimen of this very rare coin that I have seen. It has lost in ancient times a piece of the metal forming Minerva's helmet, which, however, scarcely disfigures it; and in other respects it is well preserved.

POSTSCRIPT.

It has been found necessary to withdraw lots 108, 109 and 113, as false. They appear to have been executed by the same forger, and though they were carefully examined before they were catalogued, yet they passed for true coins until the clue was suddenly discovered.

Lot 300 was placed in the proof sheet to Ilium or Cnidus with a *query*, out of deference to Mr. Whittall's appropriation to Ilium; but on the discovery of a portion of KNI., the coin was placed to Cnidus—hence arose its ungeographical position.

In lot 770 occurs the name of a town Ococlea, which is quite unknown to me, but is given to Phrygia on Mr. Whittall's authority.

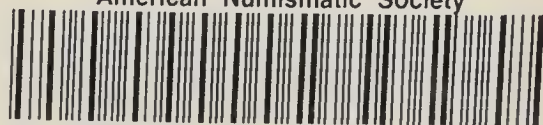

The coin forming lot 1031, is given to Lacedaemon by Mionnet; but a paper by Mr. Newton, of the British Museum, removes the appropriation to Allaria in Crete. For which, as may be presumed in a suggestion coming from such a quarter, strong reasons are assigned. But whichever location is accepted, the rarity of the coin remains the same.—A. L.
